

KALLISTA®

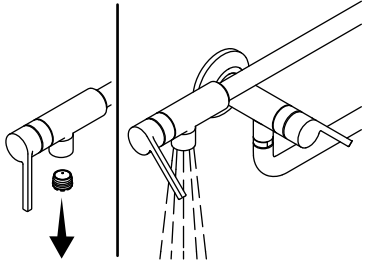

Installation Guide

Plus:
• Common woodworking and plumbing tools and materials.

<p>Record your model number.</p>	<p>Important Information Do not use petroleum-based products in this faucet.</p>	<p>Important Information Follow all local plumbing and building codes.</p>	<p>1 Install 2x4 backing flush with the studs, at the installation location.</p> 	<p>2 Install a 1/2" NPT supply pipe to extend no more than 1/2" (13 mm) beyond the wall.</p> 
<p>3 Secure the supply pipe to the 2x4 backing.</p> 	<p>4 Complete the finished wall. Provide a 1-3/16" (30 mm) hole around the supply pipe.</p> 	<p>5 Slide the mounting plate on the faucet shank. Tighten the setscrew into the groove.</p> 	<p>6 Thread the shank to the supply pipe so the mounting plate is flush.</p> 	<p>7 Position the mounting plate with the setscrew hole facing down. Mark the four screw hole locations.</p> 
<p>8 Remove the faucet from the supply pipe. Remove the mounting plate from the shank.</p> 	<p>9 Drill four 1/4" holes at the marked locations.</p> 	<p>10 Apply thread sealant to the supply pipe.</p> 	<p>11 Position the mounting plate over the holes with the setscrew hole facing down. Secure with the four screws.</p> 	<p>12 Slide the escutcheon onto the shank.</p> 
<p>13 Use a strap wrench to secure the faucet to the supply pipe.</p> 	<p>14 Align the faucet groove with the setscrew hole in the mounting plate. Tighten the setscrew.</p> 	<p>15 Slide the escutcheon against the wall with the setscrew down. Tighten the setscrew.</p> 	<p>16 Turn both handles fully clockwise to the off position.</p> 	<p>17 Turn on the water supply and check for leaks.</p> 

18 Remove the aerator and open both handles to flush debris from the faucet.

19 Turn off the water and reinstall the aerator.
