BEFORE YOU BEGIN

All information is based on the latest product information available at the time of publication. Kohler Co. reserves the right to make changes in product characteristics, packaging, or availability at any time without notice.

Please leave these instructions for the consumer. They contain important information.

NOTES:

- 1. Flush the water supply pipes thoroughly to remove debris.
- 2. If possible, install this faucet before installing the lavatory.
- 3. Inspect the supply tubing for damage and leakage. Replace and maintain as necessary.
- 4. Observe local plumbing codes.
- 5. Shut off the water supplies to the fitting.

HANDLE OPERATION

For lever handle -4, turn the left handle counter-clockwise for hot water, right handle clockwise for cold water.

For cross handle -3, turn the left handle clockwise for hot water, right handle counter-clockwise for cold water.

INSTALLATION

How to Install the Spout

Install the mounting stud(1) into the spout(2) bottom. Slide the washer(3) over the hose(4) and mounting stud until it is put into the groove of the spout bottom.

Insert the spout assembly into the central hole of the lavatory until the spout bottom is against the deck. Position the spout and keep it frontwards.

From underside, fit the washers(5, rubber washer is on the top) onto the mounting stud. Screw the nut(6) onto the mounting stud. Tighten the nut with tool(7) to secure the spout.

How to Install the Valve Bodies and Handles

Make sure the washer(8), steel washer(9) and threaded ring(10) are on the valve body(11). From underside, install the valve body into the mounting hole. **NOTE:** The valve body with red mark should be installed on the left side and connected with hot water.

Put the rubber washer(12) into the bottom groove of the nut(13). From upside, tighten the nut onto the valve body.

Adjust the outlet of valve body to connect hose easily. Secure the valve body by tightening the screws(14).

Put the O-ring(15) into the bottom groove of the handle kit(16). Tighten the handle kit onto the nut(13) with the valve closed. Adjust the handle position as shown. **NOTE:** The handle kit with red mark should be installed on the left side.

Thread the tee connector(17) into the hose(4). Connect the tee connector to the valve body(11) with the hose(18).

INSTALLATION CHECKOUT

CLEANING INSTRUCTIONS

All Finishes: Clean the finish with mild soap and warm water. Wipe entire surface completely dry with clean soft cloth. Many cleaners may contain chemicals, such as ammonia, chlorine, toilet cleaner etc. which could adversely affect the finish and are not recommended for cleaning.

Do not use abrasive cleaners or solvents on Kohler faucets and fittings.

How to Install the Drain

Remove the stopper(19) from the top waste(21). Install the top waste with the foam washer(22) into the drain hole.

Put the rubber washer(23, tapered side up) into the groove of the bottom waste(24).

Align the top waste(21) with the bottom waste(24), screw the stud(20) through the hole of the top waste and bottom waste with hexagon wrench. Then screw the stopper into the top waste.

NOTE: If needed, apply a ring of plumbers putty around the underside of the top waste, instead of using foam washer.

Ensure all connections are tight. Ensure the handles are in the off position.

Turn on the drain and main water supply, and check for leaks. Repair as needed.

Remove the aerator(25) with coin. Turn on the faucet. Run hot and cold water through the spout for about one minute to remove any debris. Check for leaks.

Remove any debris from the aerator. Shut off the faucet. Reinstall the aerator.
